“It Changed My Life” – Angie’s Story

“My name is Angie Turner, and I was born and raised in Chattanooga, Tennessee. I had my first child 32 years ago, and the episiotomy was not correctly sewn back. I went in and had corrective surgery two years later. It was unsuccessful, and I lived with a very poor quality of life for the last 32 years.

“I heard about Dr. Kaeser, made an appointment, and was thrilled. He is so professional, and his staff is professional and friendly. He put me at ease, especially with a subject that's difficult to talk about. As a matter of fact, I hadn't seen a male doctor since I gave birth to that daughter 32 years ago. So, I was a bit nervous. I went in, had my temporary procedure done, kept another diary, came back in two weeks, and had the permanent device implanted. And it's by Axonics Therapy. It comes with a remote control.

“You can control the power of it. It's got a 15-year battery life, so you don't have to worry about batteries going out and having a problem. I couldn't be happier. It changed my life. The quality of my life is so improved and I couldn't say nicer things about Dr. Kaeser.

“I couldn't say that there's anything that I would say that could have been done better. It was an excellent experience throughout. I can leave my home now. I couldn't be far from a restroom. And there were days that I couldn't leave home at all. And I can do that now. I can do anything now. This procedure really works. And it's a very simple procedure. It's painless. I mean, you feel a shot, that's it. And you're in there for a couple of hours, and you're out, and you're on your way to a new life. And that's what Dr.Kaeser has done for me, and I will be forever grateful for it.”
